

CYBER SECURITY BASICS

PROTECTING YOUR BUSINESS

SECURE

Secure your business's computer network and your data

Secure your remote workers

Protect email with filtering tools and employee phishing training

Monitor and respond to changes in your network

Use Multi-Factor Authentication ("MFA") to protect user accounts. MFA can keep hackers out of your network and limit in-network movement

MANAGE

Manage passwords

Encrypt sensitive and customer information data at rest and in use

Disable Remote Desktop Protocol access to your network from the internet

Manage privileged access

Develop a Business Continuity Plan

Manage vulnerabilities and patch regularly

PROTECT

Maintain, test and segregate backups

Create an Incident Response Plan

Protect against ransomware

Consult available cyber resources like FTC's Cybersecurity for Small Business ([ftc.gov](https://www.ftc.gov)) and consider vendor resources to bolster your security

Protect through ongoing education and training
